Subject Index

Adhesion, erythrocyte, prevention of, onto porous surfaces by fluid perfusion, 9
Adhesion of canine platelets and leucocytes, evaluation of plasma polymerized hexamethylcyclotrisiloxane biomaterials towards, 83
Adhesion of glow-discharge polymers, silastic and parylene to implantable platinum electrodes – Results of tensile pull tests after exposure to isotonic sodium chloride, 239
Adhesion, platelet, effects of prostaglandin I_2 on, 53
Adhesion, platelet, to smooth and rough hydrophobic and hydrophilic surfaces under conditions of static exposure and laminar flow, 156
Adhesion, polymer film, to platinum neurological electrodes, cyclic voltammetry for the study of, 161
Aliphatic polyesters II. Degradation of poly(DL-lactide), poly(-caprolactone), and their copolymers *in vivo*, 215
Alloy, a new stainless steel, for surgical implants compared to 316S12, 116
Alloys, Co-Cr, corrosion of, in aqueous environments, 68
Anthranilic acid, adsorption of, the effect of solvents. Search for surface bonding groups for coupling agents to teeth, adsorptive bonding to hydroxyapatite 1, 28
Bioceramic, hydroxyapatite, a physico-chemical study of crystal growth of, 105
Bioceramic implants in orthopaedic surgery, experience with, 98
Blood compatibility, possible contributions of surface energy and interfacial parameters of synthetic polymers to, 57
Body reaction to carbon fibre particles implanted into the medullary space of rabbits, 182
Bone electrets, formation of, and their change decay characteristics, 120
Bone, mechano-electrical properties of, 225
Bone mineral as revealed by ion bombardment, spatial arrangement of, 234
Bone, PN junction characteristics and photoelectromagnetic effect in, 23
Bone replacement, mechanically compatible implant material for, hydroxyapatite reinforced polyethylene, 185
Bone substitute in the jaws, hydroxyapatite as a, 19
Bone tissue structure, osteoporotic, mineralogical alterations in, 147
Calcification of glutaraldehyde-treated tissue heart valves and blood contacting elastomers during prolonged use in medical devices: a physico-chemical view, possible causes for the, 14
Calcium phosphate ceramics, comparative histocompatibility testing of, 159
Carbon fibre particles implanted into the medullary space of rabbits, body reaction to, 182
Cements, glass ionomer, physico-mechanical consequences of exposing, to water during setting, 112
Ceramics, calcium phosphate, comparative histocompatibility testing of, 159
Charge decay characteristics, formation of bone electrets and their, 120
Contact stress, influence of variation in, on the sliding-wear behaviour of dental amalgam, 46
Controlled drug delivery systems, present and future applications of biomaterials in, 201
Controlled release glasses for biomedical use, 244
Corrosion of Co-Cr alloys in aqueous environments, 68
Coupling agents to teeth, search for surface bonding groups for, adsorptive bonding to hydroxyapatite 1: adsorption of anthranilic acid – the effect of solvents, 28
Crystal growth of hydroxyapatite bioceramic, physico-chemical study of, 105
Cyclic voltammetry for the study of polymer film adhesion to platinum neurological electrodes, 161
Dental amalgam, sliding-wear behaviour of, influence of variation in contact stress on the, 46
Dental and maxillofacial surgery, implants in, 133
Dental materials, determination of the specific heats of, by differential thermal analysis, 179
Dental resins and teeth, chemical bonding between, adsorption of N(2-hydroxyl-3-methacryloxypropyl)-N-phenylglycine (NPG-GMA) on cupric ion-enriched hydroxyapatite surface to improve, 78
Differential thermal analysis, the determination of the specific heats of dental materials by, 179
Drug regimens, novel research tool for optimising, osmotic pump, 89
Dura mater, human, preserved in glycerol, a study of the uniaxial mechanical properties of, 41
Elastomers, blood contacting, calcification of glutaraldehyde-treated tissue heart valves and, possible causes for the, during prolonged use in medical devices: a physico-chemical view, 14
Elastomers, porous, histopathologic observations after short-term implantation of two, in dogs, 171
Electrets, bone, formation of, and their charge decay characteristics, 120
Electrical, mechano, properties of bone, 225
Electrodes, platinum neurological, cyclic voltammetry for the study of polymer film adhesion to, 161
Erythrocyte adhesion onto porous surfaces, prevention of, by fluid perfusion, 9
Esterification, starch nicotinates with different degrees of, solution characterization of, 49
Fibrin clot samples, preparation of, for tensile stress-strain experiments, 55
Fixation devices, internal, cautionary note on the strength of materials for, 124
Fluid perfusion, prevention of erythrocyte adhesion onto porous surfaces by, 9
Glass ionomer cements, physico-mechanical consequences of exposing, to water during setting, 112
Glasses, controlled release, for biomedical use, 244
Glutaraldehyde-treated tissue heart valves, calcification of, possible causes for the, and blood contacting elastomers during prolonged use in medical devices: a physico-chemical view, 14
Glycerol, human dura mater preserved in, a study of the uniaxial mechanical properties of, 41
Heart valves, glutaraldehyde-treated tissue, and blood contacting elastomers during prolonged use in medical devices: a physico-chemical view, possible causes for the calcification of, 14
Hexamethylcyclotrisiloxane biomaterials, evaluation of plasma polymerized, towards adhesion of canine platelets and leucocytes, 83
Histopathologic observations after short-term implantation of two porous elastomers in dogs, 171
Hydroxyapatite, adsorptive bonding to, adsorption of anthranilic acid – the effect of solvents. Search for surface bonding groups for coupling agents to teeth, 28
Hydroxyapatite as a bone substitute in the jaws, 19
Hydroxyapatite bioceramic, physico-chemical study of crystal growth of, 105
Hydroxyapatite reinforced polyethylene – a mechanically compatible implant material for bone replacement, 185
Hydroxyapatite surface, adsorption of N-(2-hydroxy-3-methacryloxypropyl)-N-phenylglycine (NPG-GMA) on cupric ion-enriched, to improve chemical bonding between dental resins and teeth, 78
Hydrogels, PVNO and PVNO-PVP, synthesis and characterization of, 3
Implantation of pure metals, intramuscular, the response to the, 33
Implants, a new stainless steel alloy for surgical, compared to 316S12, 116
Implants, bioceramic, experience with, in orthopaedic surgery, 98
Implants in dental and maxillofacial surgery, 133
Interfacial parameters, possible contributions of surface energy and, of synthetic polymers to blood compatibility, 57
Internal fixation devices, strength of materials for, cautionary note on the, 124
Intramuscular implantation of pure metals, the response to the, 33
Ion bombardment, spatial arrangement of bone mineral as revealed by, 234
Jaws, hydroxyapatite as a bone substitute in the, 19
Leucocytes, adhesion of canine platelets and, evaluation of plasma polymerized hexamethylcyclotrisiloxane biomaterials towards, 83
L(+)-lysine, polymer formed from methylglyoxal in the presence of, the structure of the, 166
Maxillofacial surgery, implants in dental and, 133
Mechano-electrical properties of bone, 225
Metals, pure, the response to the intramuscular implantation of, 33
Methylglyoxal, polymer formed from, in the presence of L(+)-lysine, structure of the, 166
Mineralogical alterations in osteoporotic bone tissue structure, 147
Nicotinates, starch, solution characterization of, with different degrees of esterification, 49
Orthopaedic surgery, experience with bioceramic implants in, 98
Osmotic pump: novel research tool for optimizing drug regimens, 89
Osteoporotic bone tissue structure, mineralogical alterations in, 147
Parylene, silastic and, adhesion of glow-discharge polymers, to implantable

Histopathologic observations after short-term implantation of two porous elastomers in dogs, 171
Hydroxyapatite, adsorptive bonding to, adsorption of anthranilic acid – the effect of solvents. Search for surface bonding groups for coupling agents to teeth, 28
Hydroxyapatite as a bone substitute in the jaws, 19
Hydroxyapatite bioceramic, physico-chemical study of crystal growth of, 105
Hydroxyapatite reinforced polyethylene – a mechanically compatible implant material for bone replacement, 185
Hydroxyapatite surface, adsorption of N-(2-hydroxy-3-methacryloxypropyl)-N-phenylglycine (NPG-GMA) on cupric ion-enriched, to improve chemical bonding between dental resins and teeth, 78
Hydrogels, PVNO and PVNO-PVP, synthesis and characterization of, 3
Implantation of pure metals, intramuscular, the response to the, 33
Implants, a new stainless steel alloy for surgical, compared to 316S12, 116
Implants, bioceramic, experience with, in orthopaedic surgery, 98
Implants in dental and maxillofacial surgery, 133
Interfacial parameters, possible contributions of surface energy and, of synthetic polymers to blood compatibility, 57
Internal fixation devices, strength of materials for, cautionary note on the, 124
Intramuscular implantation of pure metals, the response to the, 33
Ion bombardment, spatial arrangement of bone mineral as revealed by, 234
Jaws, hydroxyapatite as a bone substitute in the, 19
Leucocytes, adhesion of canine platelets and, evaluation of plasma polymerized hexamethylcyclotrisiloxane biomaterials towards, 83
L(+)-lysine, polymer formed from methylglyoxal in the presence of, the structure of the, 166
Maxillofacial surgery, implants in dental and, 133
Mechano-electrical properties of bone, 225
Metals, pure, the response to the intramuscular implantation of, 33
Methylglyoxal, polymer formed from, in the presence of L(+)-lysine, structure of the, 166
Mineralogical alterations in osteoporotic bone tissue structure, 147
Nicotinates, starch, solution characterization of, with different degrees of esterification, 49
Orthopaedic surgery, experience with bioceramic implants in, 98
Osmotic pump: novel research tool for optimizing drug regimens, 89
Osteoporotic bone tissue structure, mineralogical alterations in, 147
Parylene, silastic and, adhesion of glow-discharge polymers, to implantable

platinum electrodes – Results of tensile pull tests after exposure to isotonic sodium chloride, 239
Phenylglycine, N-(2-hydroxy-3-methacryloxypropyl)-N-, (NPG-GMA), adsorption of, on cupric ion-enriched hydroxyapatite surface to improve chemical bonding between dental resins and teeth, 78
Photoelectromagnetic effect, PN junction characteristics and, in bone, 23
Plastics in medical tubing applications – manufacturing considerations, 194
Platelet adhesion, effect of prostaglandin I_2 on, 53
Platelet adhesion to smooth and rough hydrophobic and hydrophilic surfaces under conditions of static exposure and laminar flow, 156
Platelets, canine, adhesion of, and leucocytes, evaluation of plasma polymerized hexamethylcyclotrisiloxane biomaterials towards, 83
Platinum electrodes, adhesion of glow-discharge polymers, silastic and parylene to implantable, results of tensile pull tests after exposure to isotonic sodium chloride, 239
PN junction characteristics and photoelectromagnetic effect in bone, 23
Poly(DL-lactide), Poly (ε-caprolactone), and their copolymers *in vivo*, degradation of, aliphatic polyesters II, 215
Poly (ε-caprolactone), and their copolymers *in vivo*, degradation of Poly (DL-lactide), aliphatic polyesters II, 215
Polyethylene, hydroxyapatite reinforced, a mechanically compatible implant material for bone replacement, 185
Polymer film adhesion to platinum neurological electrodes, cyclic voltammetry for the study of, 161
Polymer formed from methylglyoxal in the presence of L(+)-lysine, structure of the, 166
Polymer implant materials with improved X-ray opacity and biocompatibility, 151
Polymers, synthetic, interfacial parameters of, possible contributions of surface energy and, to blood compatibility, 57
Porous elastomers in dogs, histopathologic observations after short-term implantation of two, 171
Present and future applications of biomaterials in controlled drug delivery systems, 201
Prostaglandin I_2, effect of, on platelet adhesion, 53
Pump, osmotic, novel research tool for optimizing drug regimens, 89
PVNO and PVNO-PVP hydrogels, synthesis and characterization of, 3
Silastic and parylene, adhesion of glow-discharge polymers, to implantable platinum electrodes – Results of tensile pull tests after exposure to isotonic sodium chloride, 239
Sliding-wear behaviour of dental amalgam, influence of variation in contact stress on the, 46
Spatial arrangement of bone mineral as revealed by ion bombardment, 234
Specific heats of dental materials, determination of the, by differential thermal analysis, 179
Stainless steel alloy, a new, for surgical implants, compared to 316S12, 116
Starch nicotinates with different degrees of esterification, solution characterization of, 49
Steel alloy, a new stainless, for surgical implants, compared to 316S12, 116
Strength of materials for internal fixation devices, cautionary note on the, 124
Stress-strain experiments, preparation of fibrin clot samples for tensile, 55
Structure of the polymer formed from methylglyoxal in the presence of L(+)-lysine, 166
Surface bonding groups for coupling agents to teeth, search for, adsorptive bonding to hydroxyapatite 1: adsorption of anthranilic acid – the effect of solvents, 28
Surface energy and interfacial parameters of synthetic polymers to blood compatibility, possible contributions of, 57
Synthetic polymers, interfacial parameters of, possible contributions of surface energy and, to blood compatibility, 57
Teeth, chemical bonding between dental resins and, adsorption of N-(2-hydroxy-3-methacryloxypropyl)-N-phenylglycine (NPG-GMA) on cupric ion-enriched hydroxyapatite surface to improve, 78
Teeth, search for surface bonding groups for coupling agents to, adsorptive bonding to hydroxyapatite 1: adsorption of anthranilic acid – the effect of solvents, 28
Tensile pull tests, results of, after exposure to isotonic sodium chloride, adhesion of glow-discharge polymers, silastic and parylene to implantable platinum electrodes, 239
Tensile stress-strain experiments, preparation of fibrin clot samples for, 55
Titanium, influence of, on the wear of medical grade polyethylene, 221
Vascular surgery, biomaterials in peripheral, 177
Wear of medical grade polyethylene, influence of titanium on the, 221
X-ray opacity and biocompatibility, polymer implant materials with improved, 151
